wpherc.com

Audit Date

28 March 2019

For the purpose of this quick audit we are just checking the info that is accesible from outside your website. Because of that, some information might be wrong or not available at all. The full security audit includes more than 90 control points with much more depth analysis of your website and business, checking all the internal files and configurations.

	Importance	Status	Notes
General Checks			
1 Malware Check	Medium	GOOD	
2 Blacklists Check	Medium	GOOD

We have explained here all the security control points used on this report and how we have selected the importance and the status for each one of them. If you are not sure of the meaning of any of those elements, please contact us and we would love to help you.

Importance

Low Failing this won't have a security impact on your website. Your website is not insecure because of that.
Medium Failing the control points with importance Medium can be risky but it depends on other factors.
High Failing the control points with importance High put your website in risk. You should fix those as soon as possible.
